

ABOUT MAMA-HELP

The Michigan Aerospace Manufacturers Association’s Humanitarian Emergency Logistics Program (MAMA-HELP) is designed to provide a rapid response to unforeseen emergencies, including deadly contagious disease outbreaks, cyclones, tsunamis, and earthquakes. By providing a coherent and synchronized logistics structure during humanitarian emergencies, MAMA-HELP aims to get what is needed, where it is needed, when it is needed.

The MAMA-HELP logistics, emergency planners, international expeditors and construction & medical industry professionals focus limited resources wisely and effectively to stop a bad situation from becoming worse.

MAMA- HELP Legacy for Ghana project

Currently in deployment is MAMA-HELP’s *Legacy for Ghana* project who’s HAVs are delivering greater efficiency and flexibility to Ghana and the West African regional response to the Ebola emergency:

- HAVs quickly provide clinics in remote locations with critical medical supplies, vaccines, laboratory results and returned patient medical samples.
- HAVs bring cargo straight to the regional medical centers, without having to transport on larger aircraft and then transfer to ground transportation
- The hazards and slow response of ground transport are mitigated.
- Hazardous samples are transported without compromising the safety of humans.
- HAVs operate in locations and environments too remote for manned aircraft.

Gavin Brown, executive director of MAMA.

International Anti-Poaching Coalition

The Coalition will fund, train, equip, and deploy indigenous teams to combat poaching throughout Africa.

In association with the MAMA-HELP program the coalition will use HAVs – both Air & Land – for anti-poaching operations.

HAV Air Systems will provide situational awareness and communication links to ground based teams utilizing HAV Land Systems and efficiently coordinate interdiction of poachers.

The consequences of poaching are horrendous

MAMA-HELP experts will design flight routes to optimize support to dispersed remote areas. They will use communication frequency channels best suited to the specific area(s) while maintaining flexibility to routinely adjust these channels and the related flight routes as required by current local conditions.

MAMA-HELP logistics experts will keep field teams resupplied to extend their range and effectiveness. Working together MAMA-HELP, the International Anti-Poaching Coalition and you will defeat poachers.

FUNDING OPPORTUNITIES

Funding for the MAMA-HELP project comes from:

- Concerned Individuals
- Philanthropic Organizations
- The Michigan Aerospace Manufacturers Association
- Aerospace and Medical Companies

Organizations and individuals wishing to partner with MAMA-HELP are encouraged to contact MAMA at (734) 478-5533 or mamahelp@michman.org
